## TO WHOM SO EVER IT MAY CONCERN

This is to certify that we are using **Welmet Flux 81 L** for fabrication of wind mill towers for M/s. Enercon India Limited, ReGen Powertech Pvt Ltd and Kenersys.

Material used for construction is generally ASTM 515/516 Grade 60/70, EN 355 JO & J2 and E250 410W B/C (IS 2062) in thickness ranges of 8 to 70 mm. These products are used on both longitudinal and circumferential grooved butt joints which are welded from both sides of plate depending upon thickness.

The weld joints meet all the requirements of radiography, ultrasonic and mechanical properties. We have experience with these products over last 8 years.

The welding performance of the product and the services provided by the company is satisfactory and hence we have no hesitation in recommending these products for similar applications.
